

IN THE SPECIFICATION

Please amend the specification at paragraphs [0008] and [0019] as indicated below:

[0008] The above discussed and other drawbacks and deficiencies of the prior art are overcome or alleviated by a circuit breaker molded case including a strap terminal extending therefrom and a terminal connector attached to the strap terminal disposed in, ~~projecting outwardly from~~ the circuit breaker molded case. An insulator cover discrete from the molded case is disposed around the terminal connector and is trapped into the circuit breaker molded case by attachment thereof to the strap terminal. The insulator cover is configured to be used with a plurality of different field installable terminal connectors while providing electrical isolation of the terminal connector.

[0019] Still referring to Figure 2, each cassette 32, 34, 36 is commonly operated by a first cross bar (cross pin) 40 that interfaces with the internal mechanisms of cassettes 32, 34, 36 such that when one of cassettes 32, 34, 36 are opened or closed, the other cassettes 32, 34, 36 will operate cooperatively. It will be recognized by one skilled in the pertinent art that only one cross bar may be used to interface with the internal mechanisms of cassettes 32, 34, 36 such that when one of cassettes 32, 34, 36 are opened or closed, the other cassettes 32, 34, 36 will operate cooperatively. Positioning rods 33 and protrusions 35 in cassettes 32, 36 are also employed to position the cassettes 32, 34, 36 adjacent to each other. Positioning rods 31 are also used to position mechanism 38 to locate cross bar 40 to align with rotary contact assembly 56 within cassettes 32, 34, 36. Operating mechanism 38 is positioned and configured atop cassette 34, which is generally disposed intermediate to cassettes 32 and 36. Operating mechanism 38 operates substantially as described herein and as described in U.S. PATENT Application Number 6,218,919, entitled "Circuit Breaker Latch Mechanism with Decreased Trip Time". It should also be noted that employment of other operating mechanisms is contemplated, as well. The cassettes 32, 34, 36 are typically formed of high strength plastic material and each include opposing sidewalls.
